Correction

Rafieisangari R, Shiri N. A multi-adaptive neuro-fuzzy inference system with variable thresholds for heartbeat classification. Artif Intell Health. 2024;1(4):43-60. doi: 10.36922/aih.3367

The first author of the above-mentioned article has formally requested a correction to reflect a recent legal name change from Roghayeh Rafieisangari to Shabnam Rafiei. She has explained that "Shabnam" has been her given name since birth, but due to a familial decision made in respect to her grandfather, she was officially registered under the name "Roghayeh." This longstanding discrepancy between her legal name and the name by which she is personally and professionally known has caused discomfort and confusion. Additionally, the author expressed a desire to remove the suffix "Sangari" from her surname due to pronunciation difficulties and personal preference. She has recently completed the legal process to align her official documentation with her preferred name, Shabnam Rafiei. As a result, she has requested that her name be updated in her publications to maintain consistency and avoid complications in her academic and professional record.

The author has provided official documentation of the name change, though some materials are currently only available in Persian. The author has also provided supplementary evidence of her name change, including a successfully updated authorship in another publication in the *International Journal of Circuit Theory and Applications* (doi: 10.1002/cta.4076). Additionally, the journal editor confirmed that the name change has been reflected in the author's ORCID profile (https://orcid.org/0000-0003-0298-1167), further supporting the identity of the individual requesting the correction.

The journal editor has accommodated the author's request and approved the modifications to the article, following advice from COPE Members and COPE Council Members, as summarized in a relevant COPE case study.[a] Following the name change to the first author, the updated citation to this article is as follows:

> Rafiei S, Shiri N. A multi-adaptive neuro-fuzzy inference system with variable thresholds for heartbeat classification. *Artif Intell Health*. 2024;1(4):43-60. doi: 10.36922/aih.3367

This modification has been reflected and integrated directly in the latest version of record for this article, and a brief statement flagging the modification made is displayed on the title page of said version of record.
