

Editorial

Next COP meeting is scheduled at Baku, Azerbaijan. And reduction of fossil fuel usage is not on the agenda since it is their bread and butter! Such a contrasting stand exposes gaps in international understanding of deteriorating global climate change that seems now irreversible. I think future generations may have to lead a lifestyle that has resilience to changing pattern of global climate. Even personal clothings may have to be adjusted to unpredictable weather at different regions of the world. It is a tall order to ask for but inevitable.

Northern India is now approaching what is commonly known as agri waste burning in October-November period every year and aided by wind direction, the Gangetic plain areas annually face severe air pollution that is hard on seniors and children and nobody has come up with practicable and implementable remedies for the same. Seems we are born to suffer due to climatic events and not very active governance at ground level everywhere in the world.

Happy reading!
