

RESEARCH ARTICLE

Automated and scalable fabrication of scaffolded spheroids as building blocks for modular tissue engineering

Supplementary File

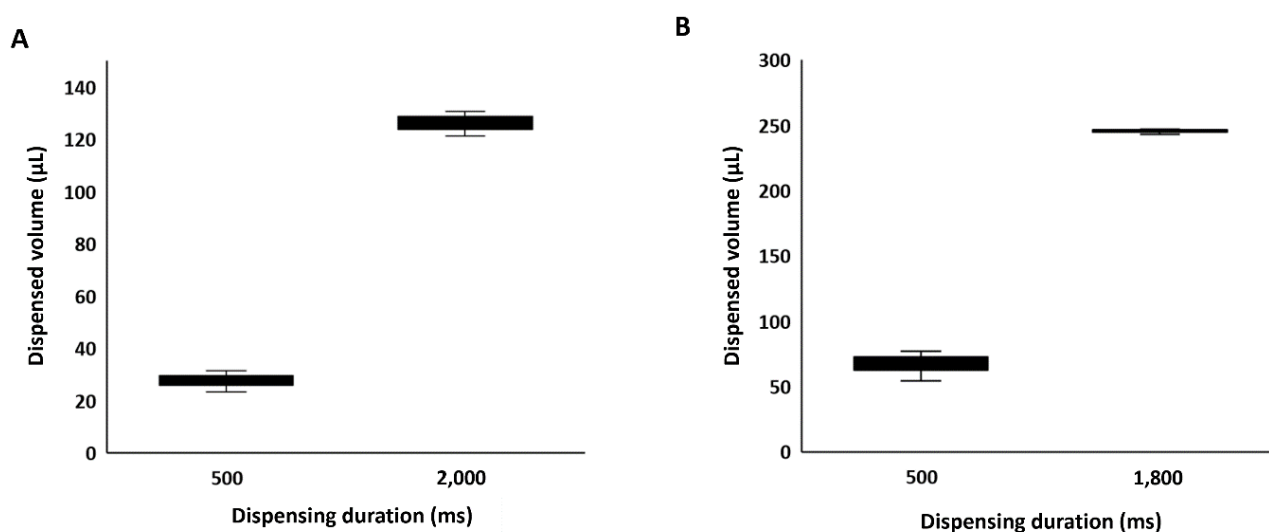

Figure S1. Volumetric dispensing modes. Repeatability comparison of volumetric dispensing modes (A) using a microfluidic device at valve opening times of 500 ms and 2,000 ms at 25 mbar, and (B) using a separate fluid line at valve opening times of 500 ms and 1,800 ms at 50 mbar.
