Translational Virology - COVID-19, The Perfect Example

Abstract

The Translational virology, characterized as "from bench to bedside", covers all issues from basic research through clinical evaluation and final registration and drug/vaccine approval. The objectives are to accelerate and streamline the innovation process at all stages. It covers the identification of the cause of disease, screening of potential prophylactic or therapeutic agents, evaluation in animal models, confirmation of activity in human clinical trials, registration and approval. The recent COVID-19 pandemic represents a perfect example of
